

Rimsa ordered second brand new sizing machine

Turkey's Rimsa company started as a weaving and sizing company in 2003. Three years ago Rimsa also began to produce denim fabrics. After buying a slasher dyeing-range from PRO-SMH in 2017 with outstanding dyeing results, the company now placed a new order for a sizing machine from PRO-SMH Group.

Due to the very good experience with the first sizing machine from PRO-SMH, which is an integral part of the slasher line, Rimsa now ordered a second sizing-range.

According to the statement of Rimsa company owner, high performance, minimum machine stops, easy operation and low maintenance of the existing PRO-SMH machine were the main reasons for preferring and choosing again PRO-SMH.

The machine is compatible with the latest labor safety, environment regulations and industry 4.0 high-tech. The Windows-based operation software is developed in-house by PRO-SMH with remote access, which enables to monitor the machine in detail. The HMI has a full lot and fault history. Thanks to its dynamic structure, it is possible to perform service, trouble shooting and software updates while the machine is running.
