

TKS relies on PRO-SMH again

Yusuf Alper (owner of TKS) and Hasan Cakir (co-owner of PRO-SMH)

TKS was one of the largest customers of Sucker in Turkey, having numerous sizing and warping machines still in operation. After PRO-SMH upgraded all these machines to modern control technology in recent years in a professional and convincing way, it was an easy task for Mr. Yusuf Alper, owner of TKS, when the investment of a new machine was up for decision.

The newly installed ultra-modern sizing range is coming in a one-size-box configuration, using the PS-W size box with pre-wetting trough and is laid out for a maximal working width of 2.200 mm. The head stock is suitable to provide weaving beams at a width of up to 3.800 mm.

Together with the sizing machine TKS also has taken delivery of a new direct warper. Both machines of course are equipped with modern control technology and tele-service features and are fully compliant with Industry 4.0, which became a standard feature for all PRO-SMH machines.
